

Panel Mount Wattmeters

The Coaxial Dynamics series of Panel Mount Wattmeters are designed to measure RF power in 50-Ohm coaxial cables and transmission lines. Elements are available in the range of 100mW to 10kW and from 2-2300 MHz.

Complete with built in 7/8" line sections that accept our Quick Match connectors to mate with your cable or transmission line. (Normally supplied with female 'N' connectors)

81002-A

Model 81002-A is a 19" panel with a single meter, Forward/Reflected switch and a dual socket line section.

81003-A

Model 81003-A is a 19" panel with a single meter and line section.

81006-A

Model 81006-A is a 19" panel with two meters and a dual socket line section.

The choice of forward or reflected power measurements is determined by the direction of the arrow on the element. By rotating the element, power is measured in the opposite direction. (Model 81003-A)

By using a Wattmeter with dual socket line sections, the reflected element may be selected to be more sensitive (up to a 10:1 ratio) for much more accurate measurement of reflected power.

Features:

4 1/2" Mirrored Scales

Compatible with Standard Elements

Built-in Line Sections

Two Year Limited Warranty
